

## **IN THE SPECIFICATION**

**Please amend the paragraph beginning at page 11, line 34 as follows:**

As shown in the figure, the basic block configuration is no different from the configuration shown in Fig. 16, but the internal configuration of the control unit 22 is altered. Namely, a discrimination unit 41 and an analyzing unit 42 are formed as the discriminating means 31 of Fig. 2, and a transmission path band managing unit 43 is formed as the deciding means 32 of Fig. 2. Also, parameter information and routing information 24A are further held in the memory unit 24. This becomes the memory means 33 of Fig. 2.

**Please insert the following after the paragraph ending at page 13, line 31 as follows:**

S28: If the result of step S24 is No, the received packet is not a “voice call packet”, but a “data packet”, and therefore the voice call control according to the present invention is not applied to that packet. Also, if the result of step S25 or S 26 is No, communication control is achieved so as not to transmit the received voice call packet.
